

Cayden's Cleaning Company

Equipment List

We use professional-grade equipment to make sure every job is done to a high standard, from a quick residential tidy-up to a full commercial kitchen deep clean. Below is a summary of the core equipment our teams bring to every booking.

HEPA-Filter Vacuum Cleaners

Commercial backpack and upright vacuums fitted with HEPA filtration to capture fine dust, allergens, and debris from carpets, upholstery, and hard floors.

Hot Water Extraction Machine

Used for carpet and upholstery shampooing. Hot water and cleaning solution are injected deep into fibres and then extracted along with the loosened dirt and moisture.

Pressure Washer

High-pressure water equipment for exterior surfaces, driveways, and heavy-duty degreasing jobs such as kitchen exhaust hoods and commercial floors.

Microfiber Cleaning Systems

Colour-coded microfiber cloths and mop systems that trap dirt and bacteria effectively while preventing cross-contamination between areas.
